

ARFRISOL

Strategic
Special
Project

Bioclimatic Architecture and Solar Cooling. The project that aims to prove bioclimatic architecture is the future in energy-efficient building.

Its **main objectives** are:

- To make bioclimatic architecture and solar energy compatible with symbolic public buildings: Research Demonstrators/Containers.
- To save energy and use energy rationally.
- To define models for integrating and controlling solar energy strategies.
- To prove that buildings of this kind work.
- To train professionals.
- To optimise the components that are used.
