

## Acoustically Efficient, Healthful Systems and Buildings

R&D on new, high-performance products and systems for direct, specific application in building construction and comprehensive building design, without neglecting other product requirements.

- **Acoustically sustainable urban settings.**
- New product design
  - Cladding in opaque materials and glass.
  - Building systems.
  - Indoor architectural products: frames, partition walls.
- Validation of tools for simulating the way building system noise is transmitted.
- Development of a building design tool for studying sound insulation.
